

In the Claims:

Please amend the claims as follows:

1. (Original) A method for use in determining the position of a user terminal,  
comprising:  
    receiving at the user terminal a digital television (DTV) broadcast signal transmitted by a  
DTV transmitter;  
    tracking a periodic component of the DTV signal using a delay-lock loop (DLL),  
including  
    selecting an observation interval based on the timing of the periodic component, and  
    turning on a portion of the DLL during the observation interval, and turning the portion  
off otherwise; and  
    determining a pseudo-range between the user terminal and the DTV transmitter based on  
the DTV broadcast signal; and wherein  
    the position of the user terminal is determined based on the pseudo-range and a location  
of the DTV transmitter.
